CloseMessage(messageName as String)	Closes the message whose name matches messageName.
Show(theMessage as GraffitiWebAlertMessage)	Shows the specified message.

Properties

Name	Type	Default Value	Description
			This class exposes no properties.

Examples

Handling Button Clicks

GraffitiWebAlert has two methods for catching when GraffitiWebAlertButtons are clicked on the GraffitiWebAlertMessage instance. The first, ButtonClick, simply provides string parameters for handling simple messages. The second, ButtonClick_0 has object parameters for more advanced usage.

A typical implementation may look like this:

```

Sub ButtonClick_0(theMessage as GraffitiWebAlertMessage, theButton as
GraffitiWebAlertButton) Handles ButtonClick_0
  select case theMessage.Name
  case "yesNo"
    if theButton.Name = "yes" then
      ' User clicked yes.
    else
      ' User clicked no.
    end if
  case "yesNoCancel"
    if theButton.Name = "yes" then
      ' User clicked yes.
    elseif theButton.Name = "no" then
      ' User clicked no.
    else
      ' User clicked cancel.
    end if
  end select
End Sub

```
