Constants

Name	Type	Value
		This class exposes no constants.

Events

Definition	Description
	This class exposes no events.

Methods

Definition	Description
NewAnimatedObject(theControl as WebControl as GraffitiWebAnimatorObject	Created a new animator object referencing the supplied WebControl. All of the work is done via the GraffitiWebAnimatorObject.

Properties

Name	Type	Default Value	Description
			This classes exposes no properties.

Examples

Position and Fade in a Container

This example shows how to effectively chain animations with GraffitiWebAnimator. Starting with a Container off-screen, or whose Visible property is True, this snippet will hide it, move it in to place, then fade it in for a really nice effect.

```
Dim animContainer As GraffitiWebAnimatorObject =
GraffitiWebAnimator1.NewAnimatedObject( ContainerControl1 ).Fade(
GraffitiWebAnimator.EffectOperation.Hide, 1 ).Position( 100, 100, 1 ).Fade(
GraffitiWebAnimator.EffectOperation.Show, 1000 )
```
