

Enumerations

Name	Values
	This class exposes no enumerations.

Constants

Name	Type	Value
		This class exposes no constants.

Events

Definition	Description
DataAvailable(Result as String)	This event signals that a barcode has successfully been read, and the data from that barcode is contained in the Result variable.
DevicesAvailable()	This event fires when the Devices() property has been populated.
Error(errorReason as String)	This event fires when the decoding library signals an error in reading.
PermissionDenied()	This event signifies that the user has elected to disallow camera access on their device.

Methods

Definition	Description
Reset()	Resets (or stops) scanning.
Scan(Device as Pair)	Starts scanning on the provided device.

Properties

Name	Type	Default Value	Description
Devices()	Pair	Array	The image capture devices available to the session.

Notes

Security

Most modern browsers, for security reasons, will not allow access to the computer's camera unless the page is loaded over a secure (HTTPS) connection. This means you must deploy with a valid certificate or text locally over HTTPS with a self-signed certificate.
