

# Overview

GraffitiSuite, as of Release 29, allows you to use combined versions of JavaScript and Stylesheet resources. This will greatly reduce the overhead of your application as the vast majority of all resources are loaded in just a few requests to your server, and your application only needs to retain references to a few files.

Upon enabling this feature, you should clear your browser's cache either for your specific URL or globally.

## File Dependencies

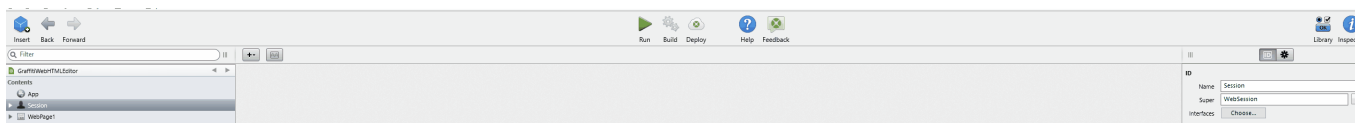

You must be using the latest version of the `scripts` directory which contains a combined sub-directory with two files:

- `graffitisuite.min.js`
- `graffitisuite.min.css`

## Session Attributes

To enable combined resource loading, you must make the following modification to your Session object's attributes.

AttributeName	AttributeValue
Combined	True
