Enumerations

Name	Values
	This class exposes no enumerations.

Constants

Name	Type	Value
		This class exposes no constants.

Events

Definition	Description
	This class does not expose any events.

Methods

Definition	Description
Constructor(rowCells as Dictionary, isEnabled as Boolean = True, rowTag as Variant = nil)	Creates an instance of this class with the parameters as property values.
Cell(Column as GraffitiWebGridColumn) as Variant	Returns the row's value for the defined column.
Cell(Column as GraffitiWebGridColumn, Assigns Value as Variant)	Sets row's value for the defined column. Should be used as myRow.Cell(myColumn) = newValue

Properties

Name	Type	Default Value	Description
Cells Read-Only	Dictionary	Empty Dictionary	The columns values contained within the row. This exposed to make enumeration for things like output more accessible.
Children Read-Only	Array of GraffitiWebGridRow	Empty Array	Contains the children of this row in the display. Children should be added and removed via the AddChild and RemoveChild methods of the Grid.
ColSpanField	GraffitiWebGridColumn	Nil	The column to apply the span to. Only one ColSpan per row is supported.
ColSpanLength	Integer	1	The number of columns to span with the value specified in ColSpanField.
Enabled	Boolean	True	Determines whether this row's cells will be editable when AutoEdit = True
Expanded	Boolean	False	Determines the expansion state of this child in Tree mode.

Name	Type	Default Value	Description
ID Read-Only	String	""	This is automatically generated by the Grid and should never be altered.
Indent	Integer	0	This automatically generated by the Grid and should never be altered.
Parent Read-Only	GraffitiWebGridRow	Nil	The parent of this row. This is automatically generated by the Grid and should never be altered.
Selected	Boolean	False	True when the row is selected, False when not. Setting this value directly will update the Grid's selection.
Style	WebStyle	Nil	Style applied to cells in this row. Overrides everything except for style specified by AddCellStyle.
Tag	Variant	Nil	Use for storing things like your database field key. This value has no functional application beyond being used for your reference.

Examples

There are currently no examples for this class.
