

Compatability

Safari does not currently support the Icon property of web-based desktop notifications.

Enumerations

Name	Values
	This class exposes no enumerations.

Constants

Name	Type	Value
		This class exposes no constants.

Events

Definition	Description
AccessChanged()	Signifies that the user has elected to allow notifications.
NotificationClicked(notificationName as String)	Fires when the user clicks a notification.
NotificationError(notificationName as String)	Signifies that there was an error displaying the notification. Either the browser doesn't support desktop notifications, or the user elected not to receive them.

Methods

Definition	Description
CloseAll()	Closes all notifications currently open.
CoseNotification(notificationName as String)	Closes notification(s) currently open whose notificationName match the parameter.
ShowNotification(notificationName as String , Title as String , Body as String , CloseDelay as Integer = 0, Icon as String = "", ParamArray Vibration as Integer	Shows a desktop notification (or a request for access) on the user's computer. Icon should be a URL. Vibration should be a list of parameters specifying length of vibrations in milliseconds. (100, 200, 300) would be a vibration of 100 milliseconds, a pause, a vibration of 200 milliseconds, a pause, then a vibration of 300 milliseconds.

Properties

Name	Type	Default Value	Description
CanNotify	Boolean	False (Read-Only)	If True, the user has elected to receive notifications from your site.
Supported	Boolean	False (Read-Only)	If True, the user's browser supports notifications.

Examples

There are currently no examples for this class.
