

Enumerations

Name	Values
StorageTypes	Local
	Session

Constants

Name	Type	Value
		This class exposes no constants.

Events

Definition	Description
DataLoaded()	Fires when all data has been loaded.
StorageFull(Key as String , isSession as Boolean)	Is fired when a call for storage fails due to insufficient browser storage space.

Methods

Definition	Description
Count() as Integer	Returns the amount of Key/Value pairs.
Key(keyIndex as Integer)	Returns the key at the specified index.
Remove(Key as String)	Allows the developer to clear a value from the browser's storage.
RemoveAll()	Clears all stored data in browser storage for the current domain.
Value(Key as String, Assigns Value as String)	Sets a value in the browser.
Value(Key as String, DefaultValue as String = "")	Returns a value, if the key doesn't exist then DefaultValue is returned.

Properties

Name	Type	Default Value	Description
StorageType	StorageTypes	Local	Determines where in the browser's database values are stored and are accessible.
Supported	Boolean	False (Read-Only)	Returns whether the user's browser supports this functionality.

Examples

There are currently no examples for this class.
